

**ПРОЕКТНАЯ РАБОТА
по английскому языку «10
самых удивительных
животных, открытых в наше
время»**

**“Top-10 of the most amazing animals
nowadays”**

**Работу выполнила: ученица 5 Г класса, Битяйкина Лиза
Руководитель: учитель англ.языка, Лазарева С.В.**

Top-10 of the most amazing animals nowadays

The aim of the project work: learn the information about the most amazing animals on the Earth, exploring the students' relation to them.

Цель проектной работы: изучение информации о наиболее удивительных животных планеты, а так же исследование отношения к ним обучающихся нашего лица.

Project problems:

- Learn the information of the most amazing animals on the Earth nowadays;
- Find out the students' attitude to this information.

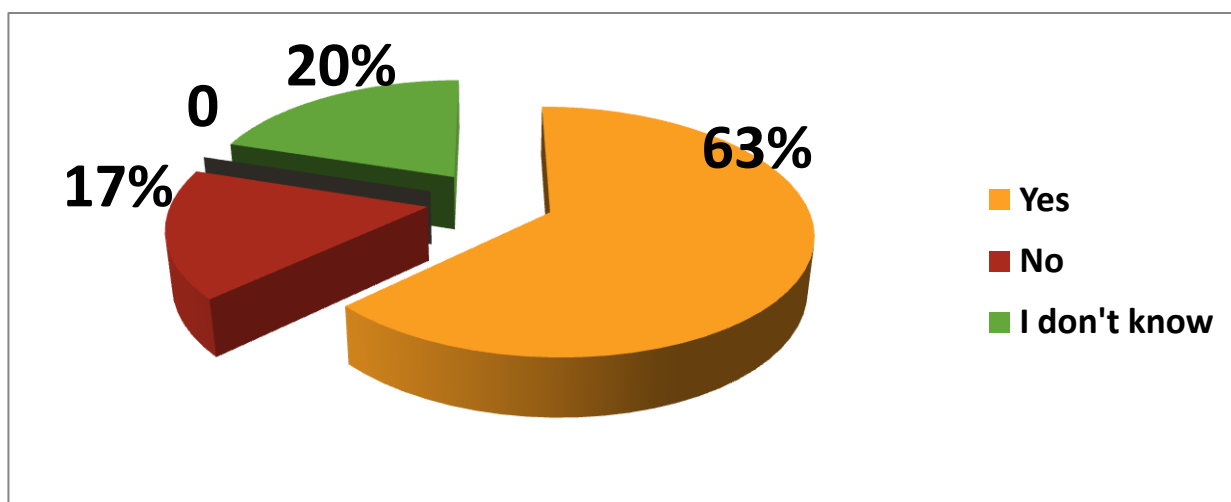

Задачи проекта:

- Изучить информацию о наиболее удивительных животных Земли на данный момент;
- Исследовать отношение обучающихся к этой информации.

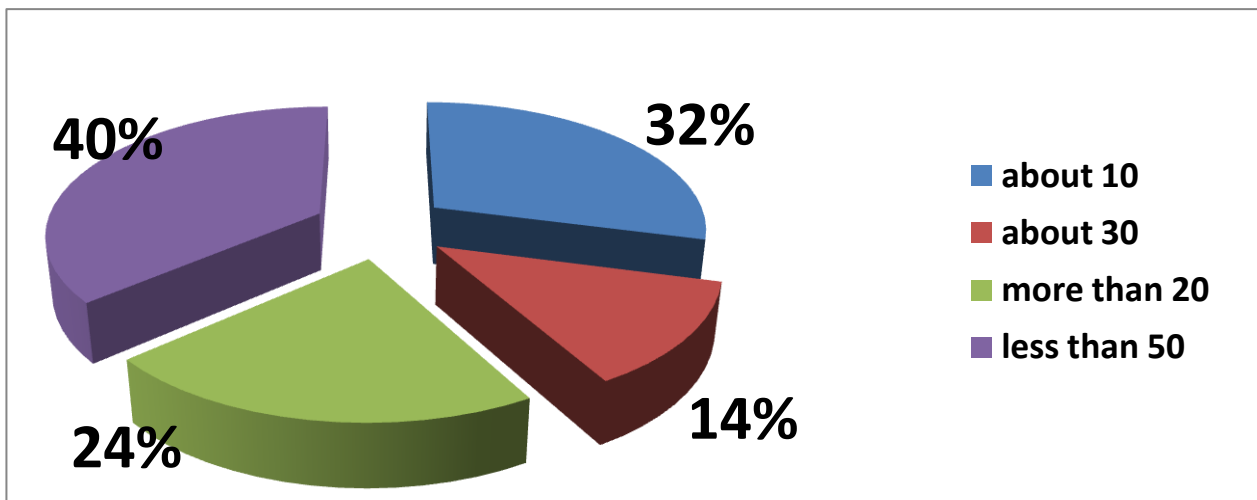

Suppose: not all species of animals are explored nowadays.

Гипотеза: Предположим, что не все виды животных известны в наши дни, что существуют совершенно новые существа.

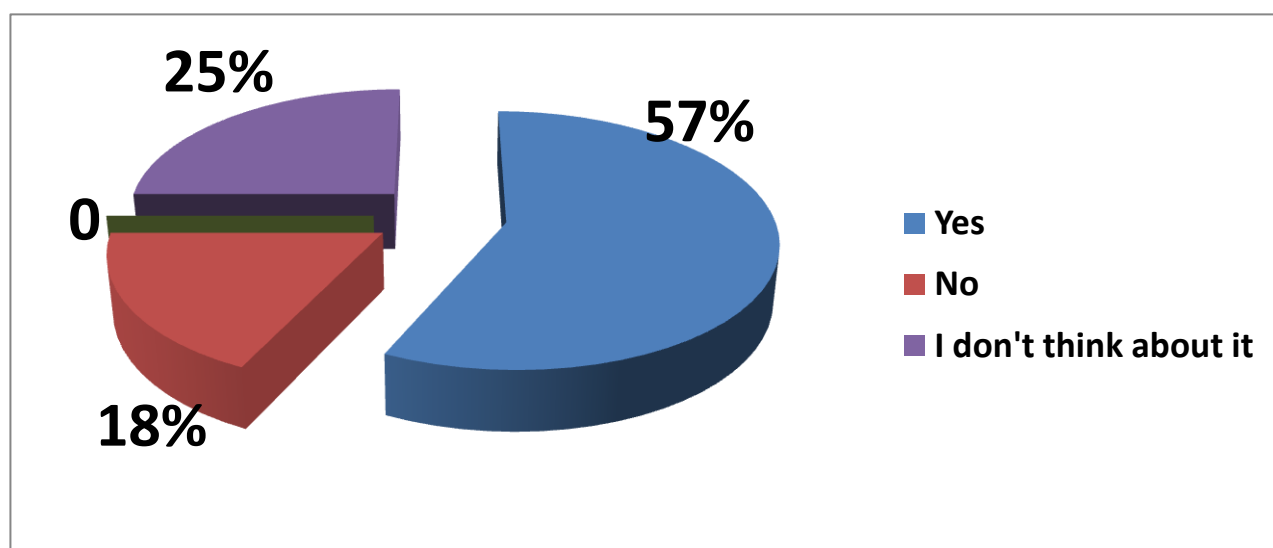

Our planet is not very big, and all species of animals are seemed already known for a long time. But it's not the truth. There are a lot of places on our planet where people have still not come. And I think there are some animals we haven't studied yet. I ask some questions to students of our lyceum. I want to know if there are any unknown species on the Earth. 63% think -"yes", 17% -"No", and 20%- don't think of it.

Then I ask them about the number of the unknown species. 32% of students think that there are about 10 unknown animals on the Earth, 14%- about 30, 24% - more than 20, and 40% believe such animals are less than 50.

And the last question that I asked students if these species are amazing. I found out that 57% of students said “Yes”, 18%-“No”, and 25% -don’t think about it.

Studying the supplemental information I found out some interesting facts. I chose the top-10 of the most amazing animals discovered last time.

The 10th place belongs to the “Horror” Wasp

Another name is the “King of Wasps”. It was discovered in 2011 in Indonesian Island . It is about 60 mm in length, with huge jaws. It eats beetles, plants and waste.

The 9th place- “Ninja” Frog. It’s another name “leopard frogs”. It was discovered in 2011 in New York. They live in the parks in the ponds. This frog is about 12 cm. It’s brown, grey, olive or green with dark spots. It eats other animals, bugs and worms.

The 8th place - the “Micro” Chameleon. It was discovered in 2012. They live in Madagascar. This chameleon is only 29 mm from the nose to the tip of the tail. It eats small insects and greenery.

The 7th place belong to the “Joker” Crab. It was discovered in 2012. They live on the Filipino Island. It’s about 15 cm, with red front legs and blue mirror shell. As all other crabs they eat fish, snails, plants and dead animals.

The 6th place- the “Crime-Fighting” Gecko. It has got another name- “Psychedelic Gecko” . It was discovered in 2011 in Vietnam. It’s length is about 25 cm. It has got orange legs and tail. It eats small insects. It looks like a superhero of famous cartoon.

The 5th place- the “Stabbing” Shark . It was discovered in 2011 near the coast of Mozambique. It lives in the great depth.

It’s about 1m length and pale grey. It kills big fish by stabbing them with sword nose.

The 4th place belong to the “Yoda” Bat. It also known as tube-nosed bat. It was discovered in 2009 in Papua New Guinea. It is about 25 cm, with green ears and nose. It eats insects and fruits as most of other bats. This name it has got because it looks like a person from the famous film.

The 3rd place- the “Yeti” Crab . It has got another name “furry lobster”. It was discovered in 2005 in the Pacific Ocean, near the Easter Island. It’s about 15 cm with 10 legs. It eats the bacteria, plankton.

The 2nd place- the “Matilda” Viper. It’s another name is “Matilda's horned viper”. It was discovered in 2010 in Tanzania. It’s about 65 cm or bigger, yellow-green-black with 2 horns. It eats small animals. It is venomous.

And the 1st place belongs to the “Michael Jackson” Monkey . It has another name “The Myanmar Snub-nosed Monkey”. It was discovered in 2010 in Burma. It is about 60 cm with a very long tail up to 78 cm. It has got long black hair and snub nose. It eats fruits, plants, insects.

All these animals are very unusual, funny and amazing.

Conclusion

The era of discovery hasn’t ended. Though people explored every corner of the planet, the deepest jungles and the highest mountains each year, and it becomes more difficult to find out new animals. But I think there are some unknown and amazing creatures on the Earth. And I try to prove it with my project work. I believe that our planet has got a lot of secrets yet.
